U.S. Nuclear Regulatory Commission Attn: Document Control Desk Washington, DC 20555

> RE: Nine Mile Point Unit 2 Docket No. 50-410 NPF-69

Subject: January - June 2002 Radioactive Effluent Release Report

Gentlemen:

In conformance with the Nine Mile Point Unit 2 (NMP2) Technical Specifications, enclosed is the Radioactive Effluent Release Report for the period January through June 2002. Included in this report is a summary of gaseous, liquid and solid effluents released from the station during the reporting period (Attachments 1 through 6), a summary of any revisions to the Offsite Dose Calculation Manual and the Process Control Program during the reporting period (Attachments 7 and 8), and an explanation as to the cause and corrective actions regarding the inoperability of any station liquid and/or gaseous effluent monitoring instrumentation (Attachment 9).

Attachment 10 to this report provides an update of actual data for the last quarter of the preceding report period. Attachment 11 to this report provides a correction to the calculated whole body dose and skin dose to a member of the public due to shoreline recreational activities located outside the site boundary reported in the previous report period.

The format used for the effluent data is outlined in Appendix B of Regulatory Guide 1.21, Revision 1. Dose assessments were made in accordance with the NMP2 Offsite Dose Calculation Manual. Distribution is in accordance with 10CFR50.4(b)(1).

During the reporting period from January – June 2002, NMP2 did not exceed any 10CFR20, 10CFR50, or Offsite Dose Calculation Manual limits for gaseous or liquid effluents.

IE48

NINE MILE POINT NUCLEAR STATION - UNIT 2 RADIOACTIVE EFFLUENT RELEASE REPORT

January – June 2002

A Member of the Constellation Energy Group

NINE MILE POINT NUCLEAR STATION - UNIT 2

RADIOACTIVE EFFLUENT RELEASE REPORT

JANUARY - JUNE 2002

SUPPLEMENTAL INFORMATION

Facility: Nine Mile Point Unit 2 Licensee: Nine Mile Point Nuclear Station, LLC

- 1. TECHNICAL SPECIFICATION PROGRAM (ODCM Limits Radioactive Effluent Controls Program)
 - A) FISSION AND ACTIVATION GASES
 - 1. The dose rate limit of noble gases released in gaseous effluents from the site to areas at or beyond the site boundary shall be less than or equal to 500 mrem/year to the whole body and less than or equal to 3000 mrem/year to the skin.
 - 2. The air dose from noble gases released in gaseous effluents from Nine Mile Point Unit 2 to areas at or beyond the site boundary shall be limited during any calendar quarter to less than or equal to 5 mrad for gamma radiation and less than or equal to 10 mrad for beta radiation, and during any calendar year to less than or equal to 10 mrad for gamma radiation and less than or equal to 20 mrad for beta radiation.

B&C) TRITIUM, IODINES AND PARTICULATES, HALF LIVES > 8 DAYS

- 1. The dose rate limit of Iodine-131, Iodine-133, Tritium and all radionuclides in particulate form with half-lives greater than eight days, released in gaseous effluents from the site to areas at or beyond the site boundary shall be less than or equal to 1500 mrem/year to any organ.
- 2. The dose to a member of the public from Iodine-131, Iodine-133, Tritium and all radionuclides in particulate form with half-lives greater than eight days in gaseous effluents released from Nine Mile Point Unit 2 to areas at or beyond the site boundary shall be limited during any calendar quarter to less than or equal to 7.5 mrem to any organ, and during any calendar year to less than or equal to 15 mrem to any organ.

D) LIQUID EFFLUENTS

 The concentration of radioactive material released in the liquid effluents to unrestricted areas shall be limited to ten times the concentrations specified in 10CFR Part 20.1001-20.2402, Appendix B, Table 2, Column 2 for radionuclides other than dissolved or entrained noble gases. For dissolved or entrained noble gases, the concentration shall be limited to 2E-04 microcuries/ml total activity. 2. The dose or dose commitment to a member of the public from radioactive materials in liquid effluents released from Nine Mile Point Unit 2 to unrestricted areas shall be limited during any calendar quarter to less than or equal to 1.5 mrem to the whole body and to less than or equal to 5 mrem to any organ, and during any calendar year to less than or equal to 3 mrem to the whole body and to less than or equal to 10 mrem to any organ.

2. MEASUREMENTS AND APPROXIMATIONS OF TOTAL RADIOACTIVITY

Described below are the methods used to measure or approximate the total radioactivity and radionuclide composition in effluents.

A) FISSION AND ACTIVATION GASES

Noble gas effluent activity is determined by on-line gamma spectroscopic monitoring of an isokinetic sample stream.

B) IODINES

Iodine effluent activity is determined by gamma spectroscopic analysis once every seven days of charcoal cartridges sampled from an isokinetic sample stream.

C) PARTICULATES

Activity released from the main stack and the combined Radwaste/Reactor Building vent is determined by gamma spectroscopic analysis once every seven days of particulate filters sampled from an isokinetic sample stream and composite analysis of the filters for non-gamma emitters.

D) TRITIUM

Tritium effluent activity is measured by liquid scintillation or gas proportional counting of samples taken once every 31 days with an air sparging/water trap apparatus.

E) LIQUID EFFLUENTS

Isotopic contents of liquid effluents are determined by isotopic analysis of a representative sample of each batch and composite analysis of non-gamma emitters.

F) SOLID EFFLUENTS

Isotopic contents of waste shipments are determined by gamma spectroscopy analyses of a representative sample of each batch. Scaling factors established from primary composite sample analyses conducted off-site are applied, where appropriate, to find estimated concentration of non-gamma emitters. For low activity trash shipments, curie content is estimated by dose rate measurement and application of appropriate scaling factors.

Sr-90		**	1.15E+01	
H-3 Fe-55		7.50E+00 7.01E-04	4.85E-03	
16-55		<u> </u>		
Fe-59 ⁴		<u>N/A</u>	<u>4.61E-03</u>	
Average MEC μCι/ml		<u>N/A</u>	<u>6.11E-03</u>	
<u>Particulates</u>		GASEOUS 4th QUARTER	LIQUID 4th QUARTER	
1. Particulates with half-lives >8 days	Cı	1.16E-03	7.05E-02	
Average release rate (gaseous) or diluted concentration (liquid) for reporting period	μCι/sec (gaseous) μCι/ml (lıquid)	1.48E-04	<u>5.07E-09</u>	
<u>Tritium</u>				
Total release Average release rate for period (gaseous) or diluted concentration (liquids) for the reporting period	Сі µСі/sec (gaseous) µСі/ml (liquid)	7.50E + 00 9.52E-01	1.15E+01 8.27E-07	
Tritium, Iodines, and Particulates (with half- lives greater than 8 days) ¹		GASEOUS 4th QUARTER	LIQUID 4th QUARTER	
Percent of Quarterly ² Dose Limit (Gaseous – 7.5 mrem,	%	1.19E-01 (Quarterly	2.18E-01 (Quarterly)	
Liquid – 1.5 mrem) 2. Percent of Annual ² Dose Limit to Date (Gaseous – 15 mrem, Liquid – 3 mrem)	%	8.87E-02 (Annual)	2.37E-01 (Annual)	
3. Percent of Organ - Dose Rate Limit (Gaseous – 1500 mrem/yr) - Dose Limit (Liquid – 5 mrem Quarter, 10 mrem Annual)	%	<u>2.39E-03</u> Quarterly	3.67E-01 (Quarterly) 3.46E-01 (Annual)	
Percent of 10CFR20 ³ Concentration Limit (Liquid)	%	<u>N/A</u>	<u>1.36E-02</u> (Quarterly)	
5. Percent of Dissolved or Entrained Noble Gas (Liquid – 2.00Ε-04 μCi/ml)	%	<u>N/A</u>	<u>**</u> (Quarterly)	

Concentrations less than the lower limit of detection, as required by the Off-Site Dose Calculation Manual (ODCM) are indicated with a double asterisk.

The dose is to the whole body for liquid effluents and to the maximally exposed organ for gaseous effluents.

³ The percent of the 10CFR20 concentration limit is based on the average concentration during the quarter.

Fe-59 was updated to correct a typographical error for liquid releases. Gaseous release of Fe-59 was correct.

Unit 1	,	Unit	2	X

Reporting Period January - December 2001

UPDATE OF DOSES TO MEMBERS OF THE PUBLIC DUE TO THEIR ACTIVITIES OUTSIDE THE SITE BOUNDARY FOR 2001

The total whole body and skin dose from shoreline recreational activities for 2001 were previously reported in the January – December 2001 Radioactive Effluent Release Report as 7.51E-04 mRem whole body and 8.77E-04 mRem skin dose. As a result of a calculation error and updated analysis results the correct total whole body and skin dose from shoreline recreational activities for 2001 are 2.26E-04 mRem whole body and 2.64E-04 mRem skin dose.

The calculation error resulted in the whole body and skin doses being reported higher than their correct values. This error has been entered into our corrective action program.
